

# VueLayout

VueLayout is a cloud platform that enables you to quickly and easily display large quantities of multimedia data (text, photos, and videos) in a magazine-style format within an iOS or Android app, or on a mobile browser.

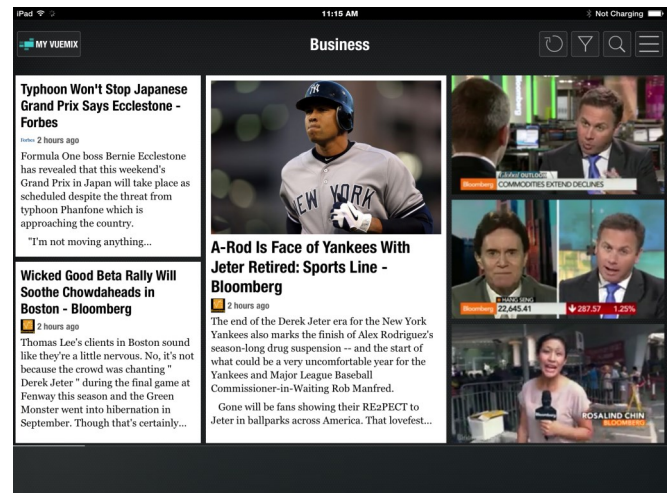

- **Easy to upload content**
  - Simply transfer files to Vuemix's servers through APIs or an intuitive user interface
- **No video processing required**
  - VueLayout will do all the necessary processing in the cloud for multi-screen display and adaptive bit-rate-based delivery of videos
- **No need to laboriously layout your content**
  - VueLayout will automatically do a best fit of your content using proprietary algorithms in a tiled magazine-like format
  - Multiple videos playing simultaneously can be mixed with text and pictures
- **Supported Devices**
  - iOS, Android, browsers (Safari, IE, Chrome, Firefox)
- **DRM support for videos**
- **Dynamic generation of playlists for display of content based on user specified rules**
- **Metadata can be added for content through APIs and is searchable**
- **Server-side and client-side ad insertion**

# VueLayout

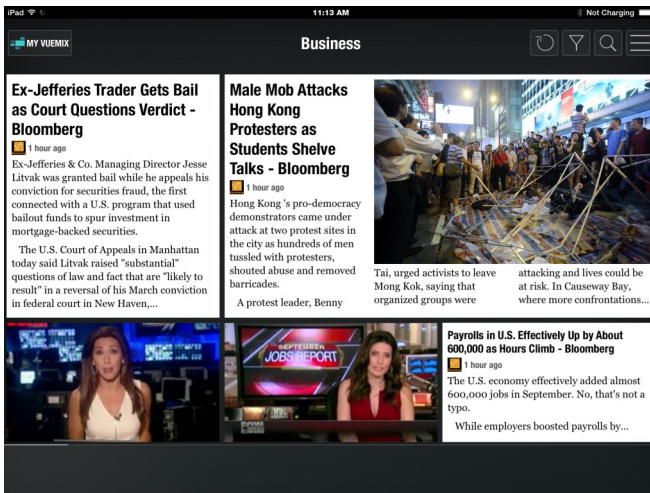

The Flexible Layout system automatically analyzes your content and chooses a best-fit layout for the pages generated.

Video, photo, and text content is arranged in a visually-engaging manner.

Multiple layouts are available.

Video content plays automatically in the pages.
