

VueMosaic

VueMosaic is a cloud-based platform that enables the next chapter in video consumption. This and other Vuemix technologies will forever change the way people search and view video content.

Our highly-scalable platform lets consumers view multiple videos in search results simultaneously without having to click videos one at a time. By dynamically combining multiple video clips into a single stream of active tiles, the VueMosaic platform delivers a custom interactive experience that is not possible using today's conventional video platforms.

Features

- Up to 16 simultaneous live channels or VOD content playing simultaneously
- Flexible screen layout with differently sized video tiles
- Instant audio switch based on user action
- Server-side mixing of videos to form a single stream for delivery
- Support for closed captioning
- Support for clients including iOS, Android, Windows, and OS X devices
 - SDK for client-side players
- Application services including recommendation engine and search engine
- Intelligent server-side adaptive streaming
- Server-side and client-side analytics
- HTTP or file-based video ingestion
